ODOUR ISSUES NEAR DULVERTON

Dulverton Waste Management (DWM) have been working closely with the Environment Protection Authority regarding the odour issues raised in May 2011.

A number of initiatives are currently being implemented:

- Dosing the compost leachate dam with a combination of microbial and beneficial enzymes to assist with removal of potential odours
- Stock feed change: fish waste reduction by 80%
- Reduced turning of windrows by more than 50% to reduce potential of odour being released
- Installing a bio filter during construction of the initial windrow
- Removal of unwanted residue in the compost leachate dam
- Installation of weather monitoring equipment
- Issuing of odour diaries to nearby properties to assist with further investigation

DWM are taking this matter seriously and will continue to address the issue in a responsible scientific manner.

Further enquiries may be directed to Matthew Greskie, Chief Executive Officer on 64247344.

Authorised for general media distribution by Matthew Greskie, Chief Executive Officer, Dulverton Waste Management on 21 September 2011.
